Data scraping

What is required?

We need to scrape data from this URL https://www.mendeley.com/research-funding/medical

<mark>I need all this structured data in a single excel sheet column wise.</mark>

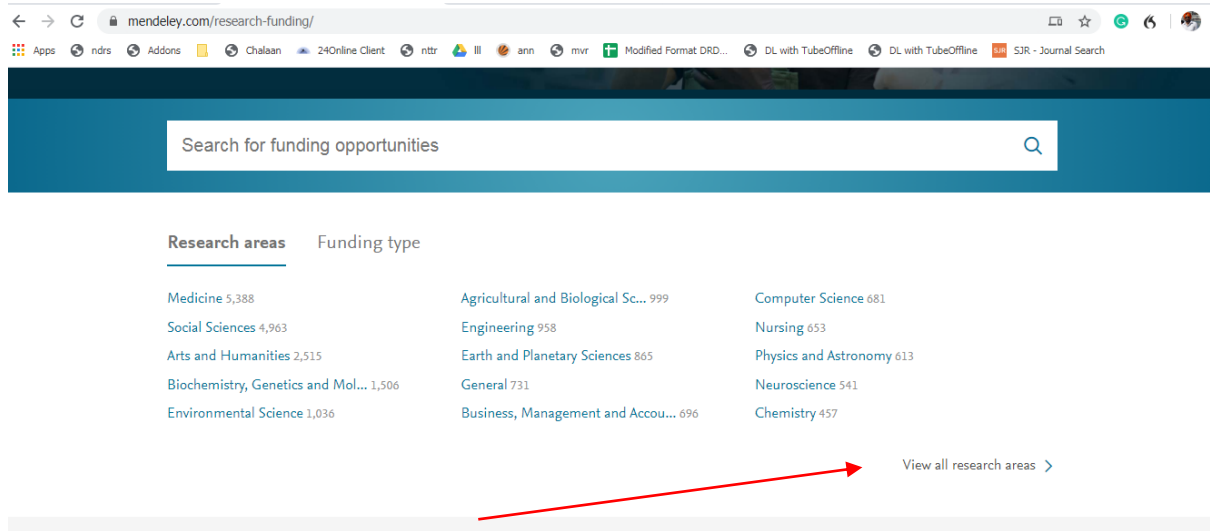

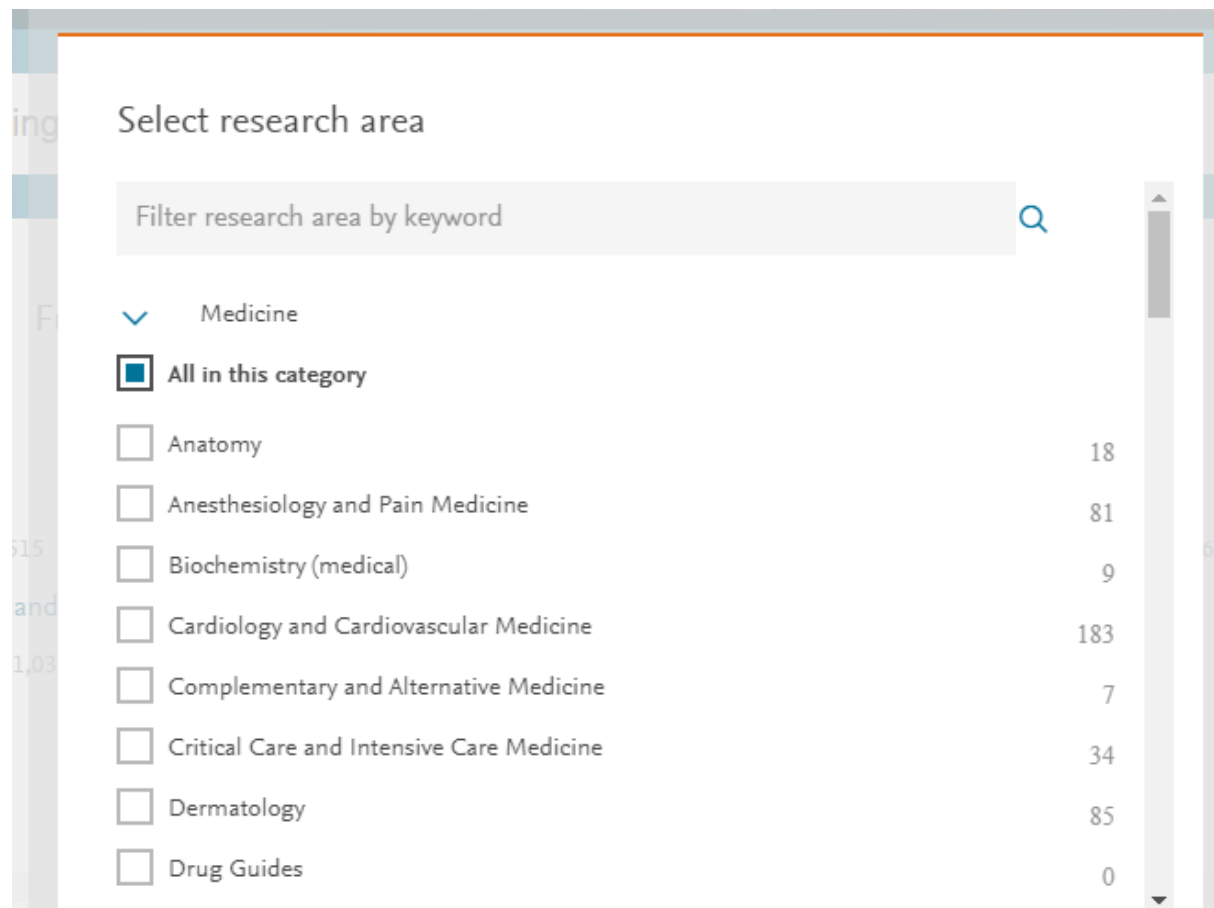

Once you are on this page click the button pointed by red arrow. This will open a pop-up menu of selecting the various funding opportunities in the form of a drop-down. Picture is given below.
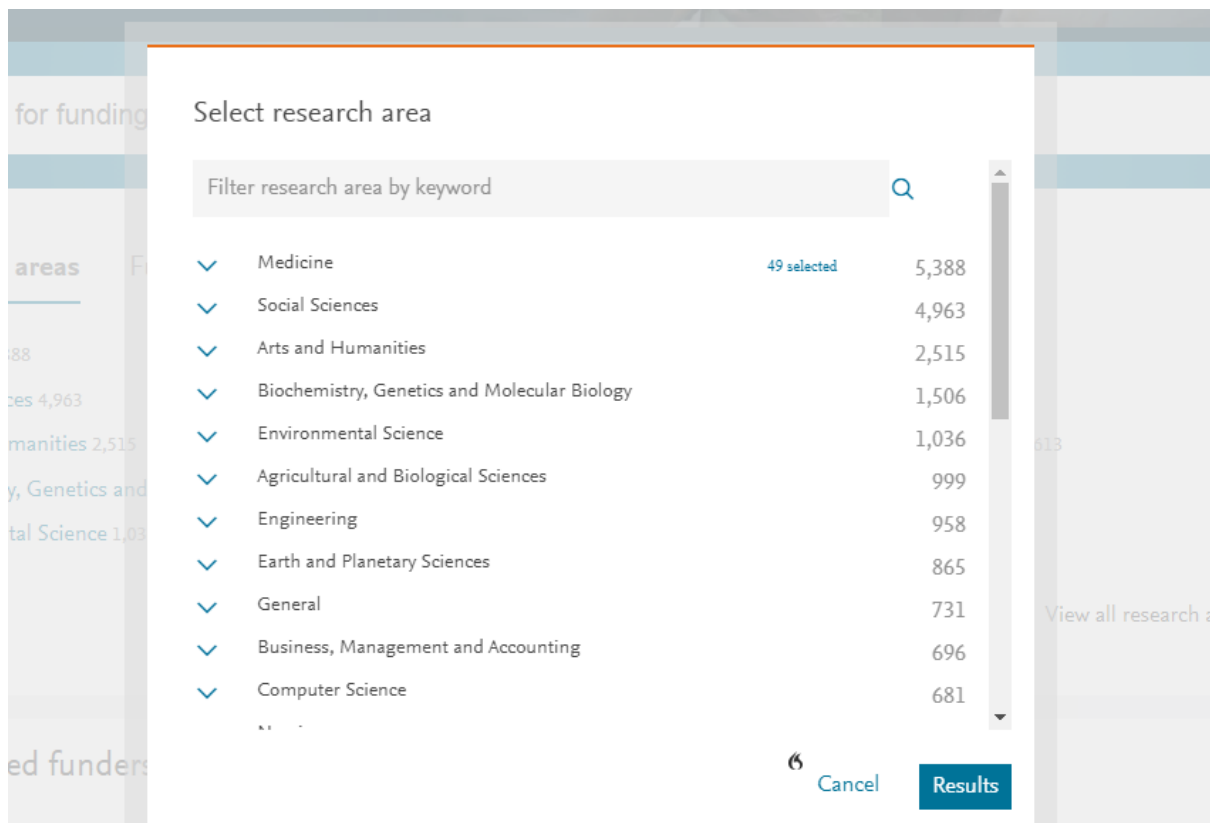

Expand and select all the main fields and sub-fields mentioned there.

From each main field, select the sub fields in a single go and click on <mark>Results</mark>

After this from the results page, crawl through each opportunity.

One value in one excel column

Description   This funding opportunity is to fund a demonstration project addressing the National Emergency Communications Plan (NECP) implementation gaps and rural medical communications. The Presidential Policy Directive–8 emphasizes national preparedness as a shared responsibility of the whole community, requiring greater involvement across multiple jurisdictions and disciplines to

Extract all the content from the description field.

Eligibility

Eligibility Description	1. Eligible Applicants Public & state controlled institutions of higher education 2. Applicant Eligibility Criteria The entity applying for REMCDP must operate or have access to an existing statewide emergency communications system that is leveraged to address rural health disparities such as mortality rates and cardiovascular diseases. The applicant must also be an emergency communications center (e.g., trauma center). Being a level 1 trauma center is not required.
